

Move Capital Letters to the Front and numbers to the back

Original version Published by [Helen Yu](#) in [JavaScript](#)

Formatting, regex, strings

Altered by Dewald Els

Create a function that accepts a string as an argument.

The function must move all capital letters to the front of a word, lowercase letters thereafter and lastly, numbers to the back. It should return a string with the reordered word.

Examples

```
reorder("hA2p4Py") → "APhpy24"
```

```
reorder("m1loveMENT") → "MENTmove11"
```

```
reorder("s9hOrt4CAKE") → "OCAKEshrt94"
```

Notes

Keep the original relative order of the upper and lower case letters the same as well as numbers
