

Given a string, return if a given letter **always** appears **immediately before** another given letter.

Worked Example

```
bestFriend("he headed to the store", "h", "e") → true  
  
// All occurrences of "h": ["he", "headed", "the"]  
// All occurrences of "h" have an "e" after it.  
// Return true
```

Examples

```
bestFriend("he headed to the store", "h", "e") → true  
  
bestFriend("i found an ounce with my hound", "o", "u") → true  
  
bestFriend("we found your dynamite", "d", "y") → false
```

Notes

- Don't count letters with spaces between them (example #3).
- All sentences will be given in lowercase.
